Peer review (part 1)

1.- What is your general research question?

Is foreign language acquisition faster in bilinguals or monolinguals?

2.- Why do you think this question is interesting? What does an answer to it tell us?

This question is interesting because it can help us to understand the methodology of how bilinguals and monolinguals learn a language and thus provide an answer.

3.- What is your specific research question?

Who learns a foreign language (English) faster, Catalan and Spanish bilinguals or Spanish monolinguals?

4.- What kind of data would you use to address Question 2 if you had unlimited resources?

I would use previous studies and publications, interviews and surveys or follow up people in class.

5.- What kind of data are you planning to use to address Question 2 within the scope of this class?

-How will you obtain it?

In the framework of this class, I will obtain them through surveys or interviews.

-How much will you collect?

I will collect data from all the people in the class that I have been able to interview or survey.

-Do you think that is enough data to address Question 2? Why (not)?

I don't think this is enough data as to have an answer to the study question I would need more subjects than those in one class.
